

Victor Spichenkoff Santana

Software Engineering Student

SUMMARY

With 3 years of independent and academic experience creating full-stack applications and a sense of confidence for the next step. Looking for the first professional opportunity to apply my skills in real-world teams. Passionate about programming and creating real solutions to real problems - sometimes even addicted to it. Looking for an internship opportunity to grow, learn and make a real impact from day one.

EDUCATION

🎓 Bachelor's Degree in Software Engineering

Uninter | Feb 2024 – Dec 2027

Relevant topics: Requirements analysis, OOP, Mobile Design, Figma & Prototyping, Scrum

COMPLEMENTARY COURSES

- Cod3r Fullstack (2022–2023): React, Next.js, Angular, Vue, Express, JavaScript ES6
- B7Web Multi-Tech (2024–2025): HTML, CSS, TypeScript, Git Flow, Docker, Tailwind Node.js
- **Google** Cloud Foundations, **Cisco** Cybersecurity, **Books**: Clean Code, Python Crash Course, Version Control with Git and GitHub

EXPERIENCE

📌 [The Million Show Game](#)

- Designed and developed a **large-scale fullstack application** inspired by "*Who Wants to Be a Millionaire*", combining advanced **frontend, backend and database engineering**.
- Implemented **authentication, roles, and admin dashboards** with full CRUD operations, ensuring scalability and security.
- Built a **custom scoring and ranking algorithm** that rewards players based on multiple factors (time, accuracy, help usage), simulating a real competitive environment.
- Developed a **probabilistic help system** with realistic chances of failure, adding depth and human-like behavior to the gameplay.
- Structured backend using **SOLID principles, Nest.js modules, and automated processes**, with migrations, complex seeding, and auto-cleaning history for DB efficiency.
- Enhanced UX with **animations, skeletons, multilingual pagination, and real-time feedback**, ensuring a polished and engaging player experience.

- Achieved **high coverage with automated tests** and used **Swagger + UML** for clear documentation.
- Tech: **Nest.js, Next.js, TailwindCSS, TypeORM, JWT/Auth Guards, Swagger**

[Dynamic Pagination API for Frontend Integration Testing](#)

- Developed a public REST API with 10+ customizable query inputs to simulate real-world pagination logic.
- Created a frontend sandbox interface for developers to test pagination without needing a backend.
- Wrote full documentation and integrated with Pexels API to provide realistic and dynamic data.
- **Tech:** Next.js, Express, Pexels API, Node.js, Figma

[Server Monitoring Dashboard](#)

- Created to solve a real-world need: keep free-tier servers online and track global usage through distributed probes.
- Handled limitations of free services by applying progressive refactors, efficient task scheduling, and built a visual dashboard for full control of server activity and usage monitoring.
- Achieved a 40% reduction in database queries from version 1 to version 2 through code optimization and smarter caching.
- **Tech:** Next.js, Express, Node.js, Figma, PostgreSQL (third-party)

[Online Multiplayer Game](#)

- Designed and implemented a real-time multiplayer game supporting multiple simultaneous matches. backend structured based on SOLID principles
- Handled connection and reconnection logic on both frontend (Next.js) and backend (ASP.NET) using WebSocket.
- Included automatic cleanup of inactive rooms to optimize performance.
- Developed local and bot modes - for offline use.
- **Tech:** C# & ASP.NET, Next.js, Docker, WebSocket

[CLI Tool for Instant Express Project Setup](#)

- Built an open-source CLI to scaffold Express.js APIs in seconds, with options for TypeScript, ORM, and database integration.

- Enables developers to create a full backend structure with a single command, saving up at least 1 hour for each project.
- Achieved 1000+ downloads in the one week on npm.
- **Tech:** C#, .NET, JavaScript, NPM, Terminal

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C#

Frameworks: React, Next.js, ASP.NET, Node.js

Databases: PostgreSQL, MySQL, MongoDB, Prisma ORM, TypeORM, Entity Framework

Tools: Figma, Git & GitHub, Canva, Docker, Postman, Vercel

Others: REST APIs, Clean Architecture, Testing, API Documentation

SOFT SKILLS

- ✓ Teamwork
- ✓ Good communication
- ✓ Willingness to learn
- ✓ Adaptability
- ✓ Deadline management
- ✓ Agile development
